LOCATION OF DRAINAGE ISSUE ON PROPERTY: Backyard. Multiple homes affected.

DESCRIPTION OF PROBLEM:

(*PHOTOS SHOULD ACCOMPANY APPLICATION)

The affected area is the downstream flow of surface water to the closest retention pond which accumulates roughly 20 homes before draining to the pond. The amount of homes producing surface water through this area creates a river roughly 4-6 inches deep and 10-15 feet wide before draining to the pond.

The amount of surface water is eroding yards, destroying fences and property in yard(s) as well as eroding the walls of the pond creating risk of property damage to homes along the line. Photos of the issue and amount of water produced by EVERY storm that comes through can be found at:
