

For clarity, emphasis the utility lines on the utility plan.

Show the water and sewer service lines to all the buildings

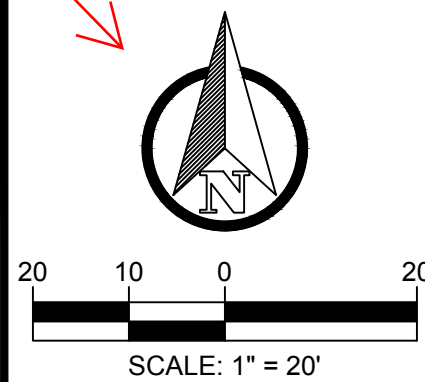

Do not connect sanitary sewer service lines directly into manholes.

If any of the proposed lines and fire hydrants that are "by others" are needed for this development, those will need their engineering plans completed and bonded before the site plan can be approved.

Show the water and sanitary sewer extensions shown on the AAB plans. And include any easements proposed on the AAB plans.
