Title:

Approval of and authorization to purchase one (1) SmartWeight Elite Tire Balancer from Hunter Engineering/Mowhawk Lifts pursuant to the Oklahoma State purchasing contract SW0798 for the Maintenance Services Department

Background:

Funds were approved for the purchase of one (1) new powered floor scrubber for the Fleet Division of the Maintenance Services Department, however, staff was able arrange for refurbishment of their machine and save those funds. The tire balancer machine currently utilized by the fleet division is nearing the end of serviceable life and repair costs are climbing, as such a new project has been created for the purchase of one (1) new tire balancer to replace this piece of equipment. This acquisition is identified under Project Number 2651150 with \$17,000 allocated through a budget transfer from Project Number 2651110.

To maximize resources and achieve cost efficiencies, staff recommends procuring the equipment through the Oklahoma Statewide Contract SW0798. This contract allows municipal agencies across Oklahoma to purchase items at pre-negotiated state contract pricing, eliminating the need for a separate bid process while providing substantial cost and administrative savings. Utilizing State Contract SW0798 ensures compliance with budgetary constraints while securing a durable, high-quality asset for the Maintenance Services Department.

Section 2-27(b)(5) of the Broken Arrow Code of Ordinances provides an exception to the competitive bidding process for supplies, materials, equipment, or contractual services purchased at a price not exceeding that set by the state purchasing agency, any other state agency authorized to regulate prices, or from purchasing consortiums.

In addition, Section V.d of the Broken Arrow Purchasing Manual authorizes purchases from “the state contract or other purchasing consortiums,” noting that such purchases eliminate the need for formal competitive bidding. State contract pricing qualifies under both the Code of Ordinances and the Purchasing Manual.

Following a review of available options, staff recommends approval to purchase one (1) SmartWeight Elite Balancer from Hunter Engineering/Mowhawk Lifts through State Contract SW0798.

SP - 3.0 SCOPE OF SERVICES: THE PROFESSIONAL SERVICE PROVIDER SHALL:

3.1 The Professional Service Provider shall provide geotechnical site reconnaissance and subsurface exploration. There will be seven (7) test borings: four (4) track mounted drill rig borings B-01 through B-04, and two (2) hand auger borings HA-01 and HA-02 (see Appendix 1 for locations). B-01 through B-03 will be drilled to a depth of 15 feet below top of pavement, B-04 will be drilled to a depth of 20 feet below the ground surface. HA-01 and HA-02 will be drilled to depths of about 5 to 8 feet. All boring will be drilled to planned depth, or auger refusal, whichever occurs first. Borings B-01 through B-04 will have samples collected using Standard Penetration Testing (SPT). Four samples will be taken in the upper 10 feet of each boring, followed by 5-foot sampling intervals. When cohesive soils are encountered, relatively undisturbed Shelby tube samples will be collected at various depths for laboratory testing at the discretion of the geotechnical engineer. Kessler DCP testing will be performed at HA-01 and HA-02 to estimate the in-place shear strength of the materials retained by the wall system. Disturbed samples will be collected from the follow bucket of the hand auger at regular depth intervals not to exceed 1.5 feet. Depending on the type of materials encountered in the hand auger borings, Shelby tube samples will be collected at a select depth.

3.2 Laboratory analysis will include Atterberg limits, sieve analysis (wash #200), and particle size gradation to define the index properties of selected soil samples and natural soil moisture

content test. Three (3) Unconfined compression and two (2) direct shear tests will be performed on relatively undisturbed portions of Shelby tube samples to determine the shear strength soil parameters values. These tests will be performed by TRI Environmental in Austin Texas. If the Shelby tube is deemed untestable there will be a credit of \$100 for each Soil Unconfined Compressive Strength test, and \$700 for each Direct Shear test not performed.

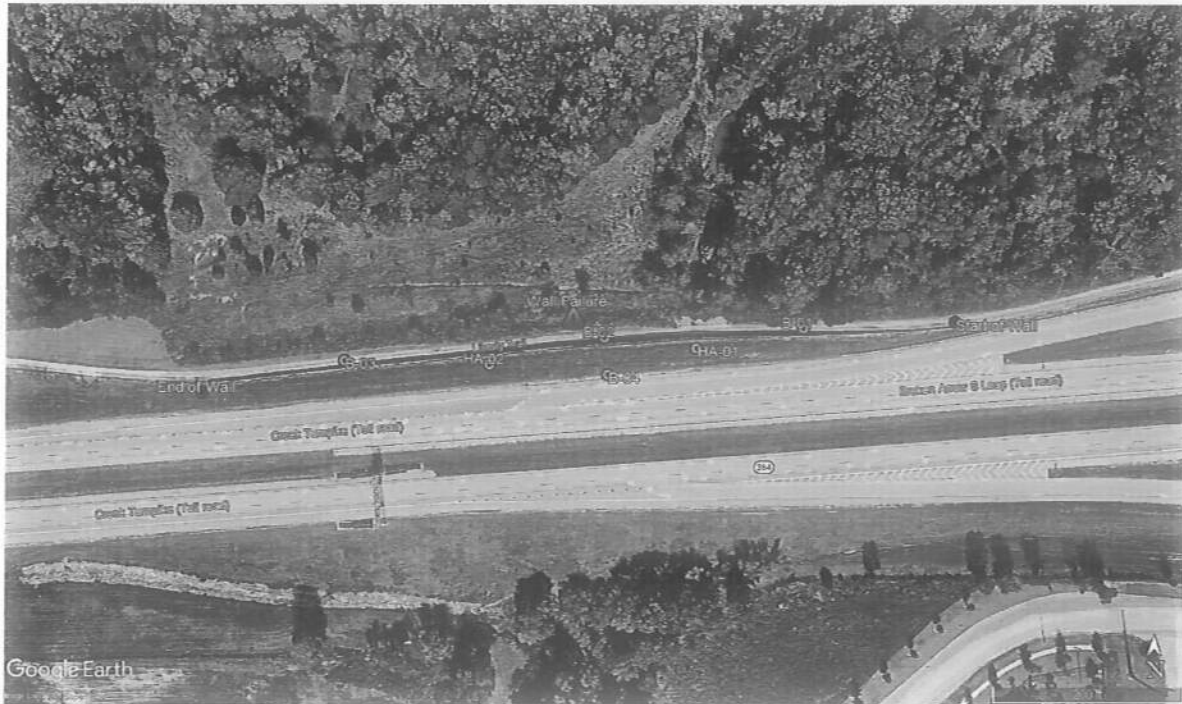

3.3 Geotechnical Analysis and Report will include the summary of existing surface conditions; a description of the subsurface conditions encountered at boring locations; a description of the groundwater conditions observed in the boreholes during drilling. Long-term monitoring is not included in this proposal; presentation of laboratory test results; site preparation considerations, including material types to be expected at the site, treatment of any encountered unsuitable soils, excavation considerations, and surface drainage; recommended allowable bearing capacity for the subsurface materials encountered below the toe of the retaining wall system; recommendations to be used for design and construction of a new segmental retaining wall, including shear strength parameter values (soil density, undrained shear strength, and angle of internal friction) for materials encountered in the foundation and retained zones of the wall system, and subsurface drainage provisions; presentation of expected total and differential settlements, and recommendations to reduce the expected movements, if appropriate; A global slope stability analysis will be evaluated for the tall section of the wall using subsurface conditions encountered in Borings B-02, HA-02, and B-04; Compaction requirements and recommended criteria to establish suitable material for structural backfill.

3.4 Work will be a not to exceed contract all costs associated with the performance of the work, including any support and supervision cost required from the Professional Service Provider.

The Order included an assessed penalty of Ten Thousand Dollars (\$10,000) and required the Authority to pay Five Thousand Dollars (\$5,000) of the assessed penalty to DEQ, which was paid on January 20, 2022. The remaining Five Thousand Dollars (\$5,000) of the assessed penalty was waived upon the submittal of an approved Supplemental Environmental Project (SEP) plan to total no less than Ten Thousand Dollars (\$10,000) and upon the completion of the SEP. The approved SEP included purchasing and installing an In-Situ Multiparameter Sonde for a continuous water quality monitoring station on Adams Creek and then submitting a final report to DEQ summarizing the findings. ON November 15, 2024, DEQ received the final report from the Authority containing monitoring data from March 2023 through March 2024. The estimated costs pertaining to purchasing and installing the Sonde totaled Ten Thousand Two Hundred Three Dollars (\$10,203).

After reviewing the final report, DEQ has determined that the Authority has completed all tasks as required of the Order. Therefore, DEQ is closing Consent Order Case NO. 21-248.

B-01 through B-03 will be drilled to a depth of 15 feet below top of pavement, B-04 will be drilled to a depth of 20 feet below the ground surface. HA-01 and HA-02 will be drilled to depths of about 5 to 8 feet. All boring will be drilled to planned depth, or auger refusal, whichever occurs first. Borings B-01 through B-04 will have samples collected using Standard Penetration Testing (SPT). Four samples will be taken in the upper 10 feet of each boring, followed by 5-foot sampling intervals. When cohesive soils are encountered, relatively undisturbed Shelby tube samples will be collected at various depths for laboratory testing at the discretion of the geotechnical engineer. Kessler DCP testing will be performed at HA-01 and HA-02 to estimate the in-place shear strength of the materials retained by the wall system. Disturbed samples will be collected from the follow bucket of the hand auger at regular depth intervals not to exceed 1.5 feet. Depending on the type of materials encountered in the hand auger borings, Shelby tube samples will be collected at a select depth.

3.2 Laboratory analysis will include Atterberg limits, sieve analysis (wash #200), and particle size gradation to define the index properties of selected soil samples and natural soil moisture

content test. Three (3) Unconfined compression and two (2) direct shear tests will be performed on relatively undisturbed portions of Shelby tube samples to determine the shear strength soil parameters values. These tests will be performed by TRI Environmental in Austin Texas. If the Shelby tube is deemed untestable there will be a credit of \$100 for each Soil Unconfined Compressive Strength test, and \$700 for each Direct Shear test not performed.

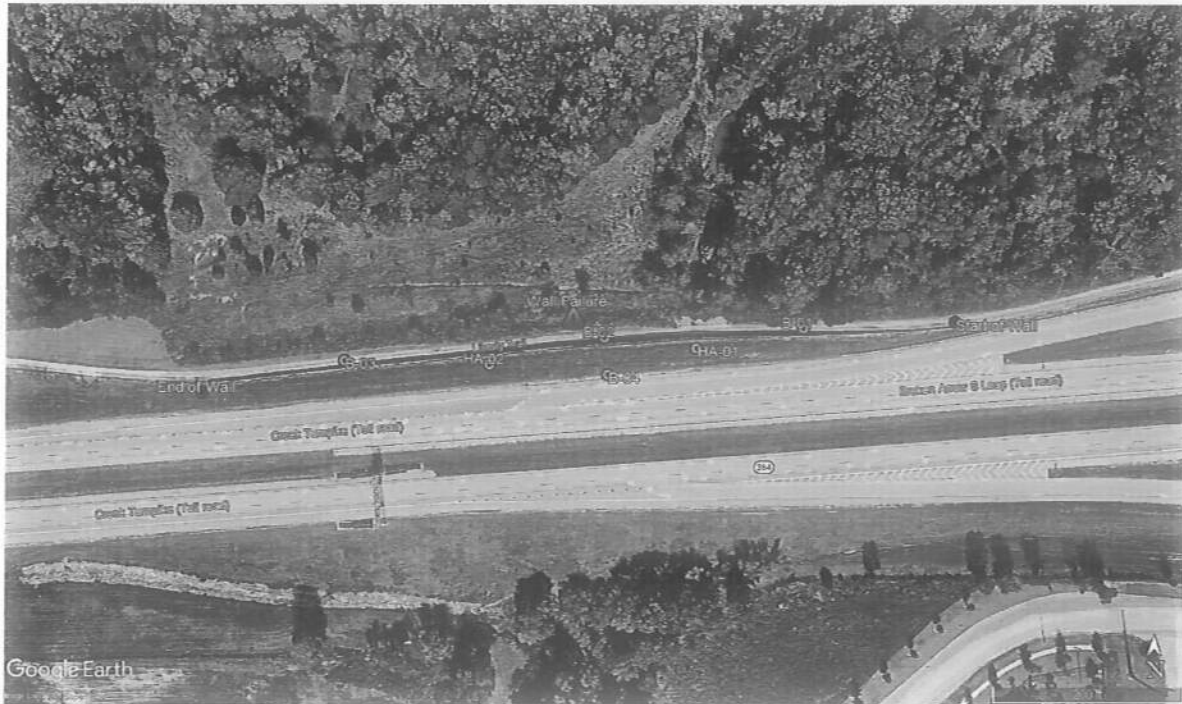

3.3 Geotechnical Analysis and Report will include the summary of existing surface conditions; a description of the subsurface conditions encountered at boring locations; a description of the groundwater conditions observed in the boreholes during drilling. Long-term monitoring is not included in this proposal; presentation of laboratory test results; site preparation considerations, including material types to be expected at the site, treatment of any encountered unsuitable soils, excavation considerations, and surface drainage; recommended allowable bearing capacity for the subsurface materials encountered below the toe of the retaining wall system; recommendations to be used for design and construction of a new segmental retaining wall, including shear strength parameter values (soil density, undrained shear strength, and angle of internal friction) for materials encountered in the foundation and retained zones of the wall system, and subsurface drainage provisions; presentation of expected total and differential settlements, and recommendations to reduce the expected movements, if appropriate; A global slope stability analysis will be evaluated for the tall section of the wall using subsurface conditions encountered in Borings B-02, HA-02, and B-04; Compaction requirements and recommended criteria to establish suitable material for structural backfill.

3.4 Work will be a not to exceed contract all costs associated with the performance of the work, including any support and supervision cost required from the Professional Service Provider.
